

## QUESTION-3:

The first screenshot shows the 'Create bucket' wizard in the AWS console. The bucket name is 'aws-c1' and the region is 'EU (Stockholm) eu-north-1'. The 'Object Ownership' section shows 'ACLs enabled' selected.

The second screenshot shows the 'Block all public access' settings. The 'Block all public access' checkbox is checked, and the 'Block public access to buckets and objects granted through new access control lists (ACLs)' checkbox is also checked.

The third screenshot shows the 'Amazon S3' console with the 'Buckets' tab selected. A table lists the bucket 'aws-c1' in the 'EU (Stockholm) eu-north-1' region, with the access level 'Objects can be public' and a creation date of 'May 3, 2023, 15:47:33 (UTC+05:30)'.

Name	AWS Region	Access	Creation date
aws-c1	EU (Stockholm) eu-north-1	Objects can be public	May 3, 2023, 15:47:33 (UTC+05:30)

AWS recommends using S3 bucket policies or IAM policies for access control. [Learn more](#)

Access control list (ACL)

☒ Choose from predefined ACLs

☐ Specify individual ACL permissions

Predefined ACLs

☐ Private (recommended)

Only the object owner will have read and write access.

☒ Grant public-read access

Anyone in the world will be able to access the specified objects. The object owner will have read and write access. [Learn more](#)

⚠

Granting public-read access is not recommended

Anyone in the world will be able to access the specified objects. [Learn more](#)

☒ I understand the risk of granting public-read access to the specified objects.
